# Research Culture

- Concept of “culture”: “**a system of *widely shared and strongly held values.***”
- A “culture of research” is a system that places great value on conducting and communicating scholarly research.
- An institution’s culture of research is not simply a group of scholars who see the importance of research. **A culture of research [supportive of international publications] provides a supportive context in which research [and international publications] is uniformly expected, discussed, produced, and valued.**

**Conceptual Framework for Interventions (Bland et al., *Academic Medicine*, 2005. Vol 80:3)**

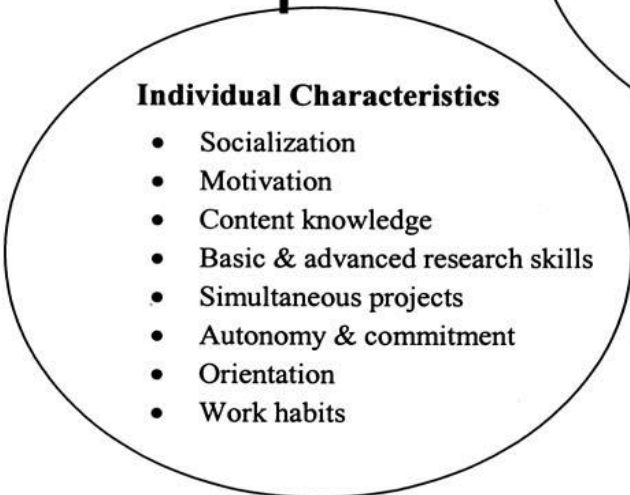

**A supportive environment facilitates productivity when its features are attended to by leadership and made available to well-prepared faculty**

**Well-prepared individuals go into a supportive environment**

**A conducive environment is a result of effective leadership**

# Focus of interventions (approved by HMU leadership in 2016)

- Effective leadership and clear goal
- Faculty training and support program
- Support for research centers/groups
- Recognition of research production
- Encouragement of faculty collaboration
- Balanced teaching and research responsibilities
- Pay that is commensurate with expectations

# Preliminary Results

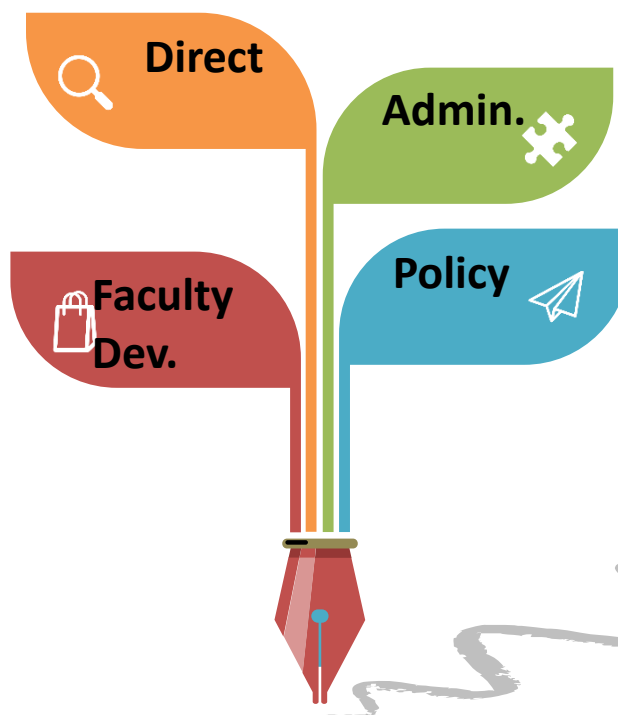

## Direct support for Authors

45 manuscripts accepted  
2017-2018

## Support for Research Group

Organize training courses on writing and publications for key research groups

Identify and provide support for research groups in various fields (public health, clinical medicine)

## Regulations

a) HMU identity in all publications

**b) Guidelines for author support**

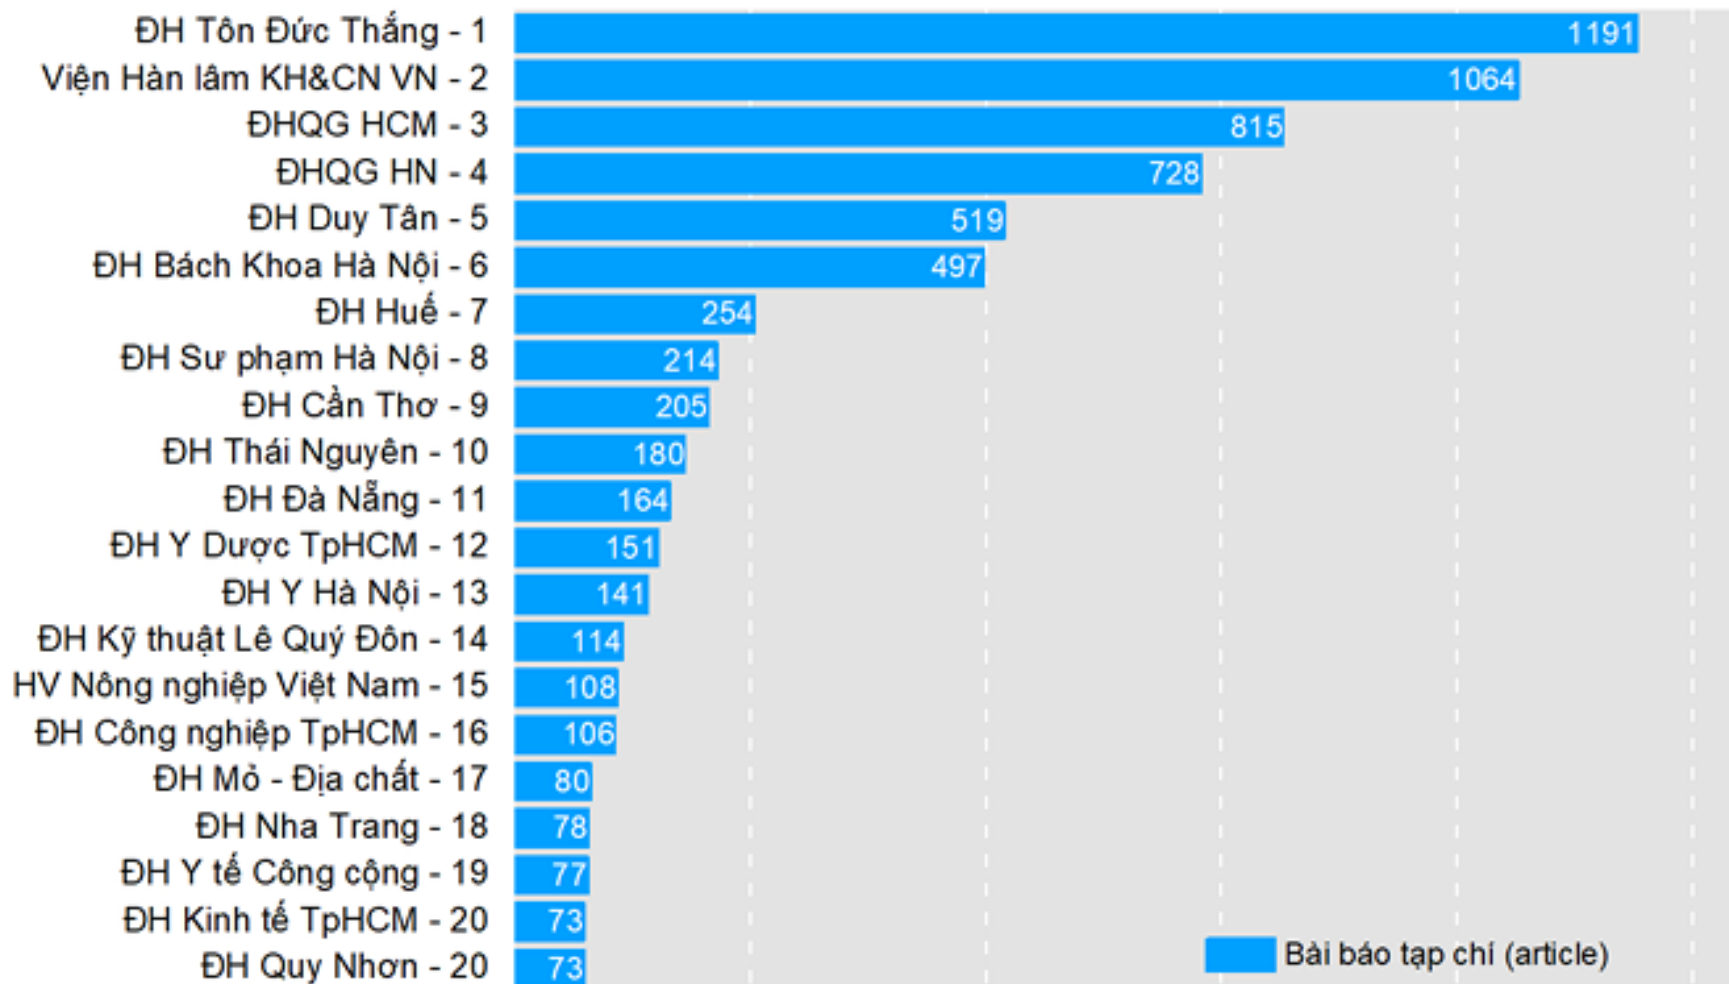

c) Guidelines for innovative small grants (TBD)

## Prizes

Dang Van Ngu Prize for authors with international publications regardless of primary affiliation

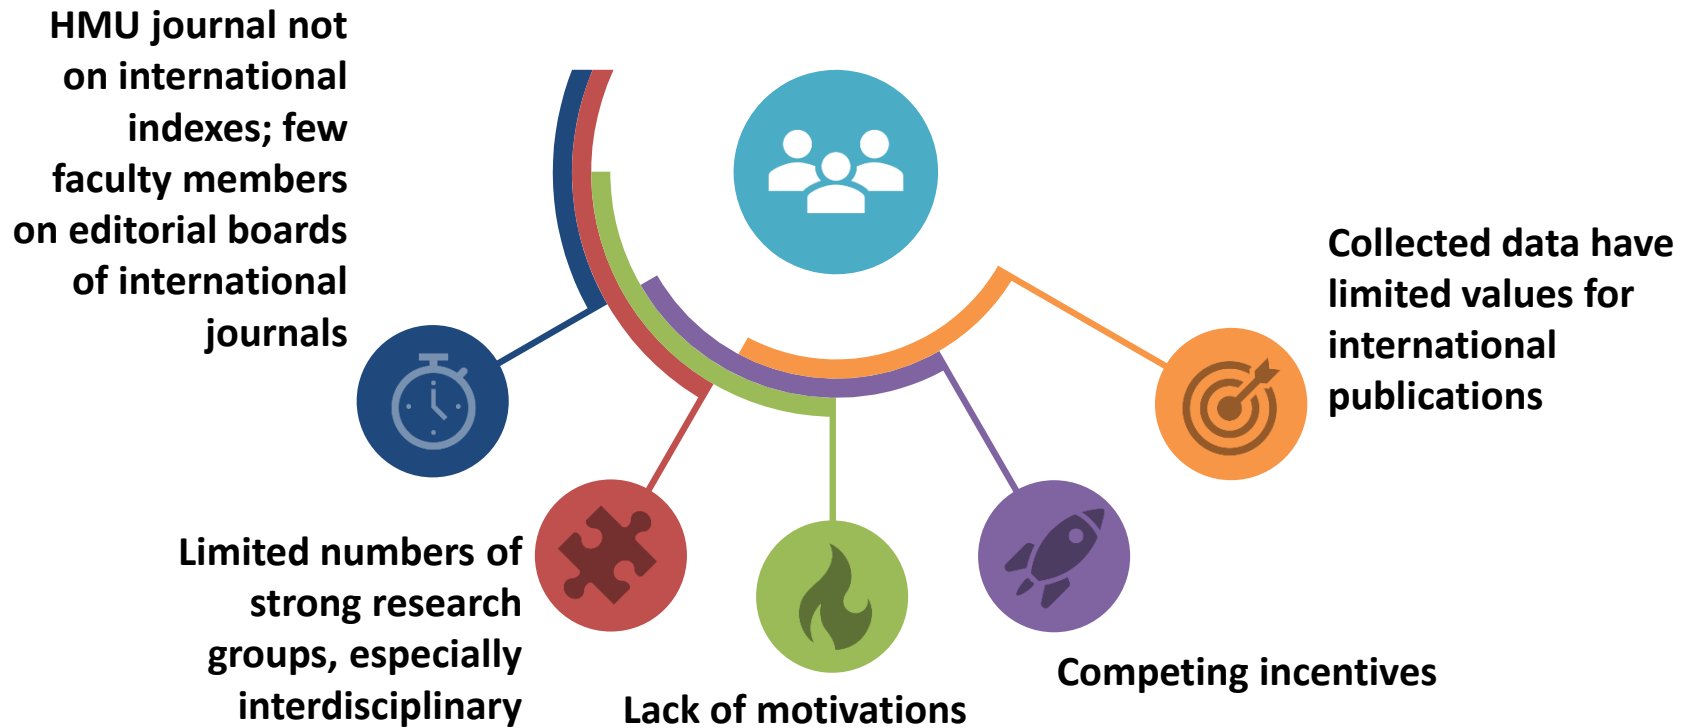

## Updated statistic: 13<sup>th</sup> among 20 top universities or research academies with international publications in Scopus system (1/2017 – 6/2018)
