

Siriraj Stoma Bag Cover : Innovation for Ostomate

Sureerat Chuangsavadsak ; MSN, ET, APN

Siriraj Hospital, Mahidol University, Thailand

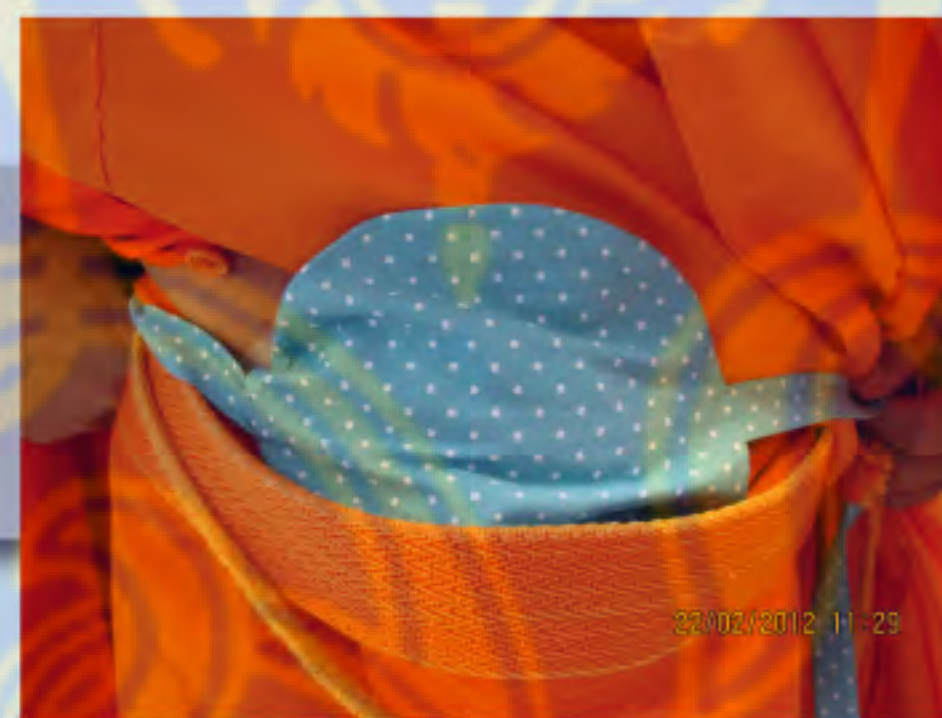

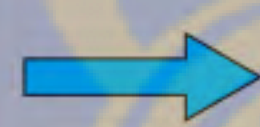

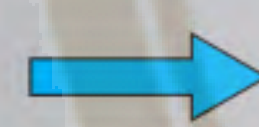

Introduction

The patients with colostomy / Ileostomy have experience physiological psychological social and spiritual problems. The two most problems that be important are body image perception and anxiety. Ostomates are anxiety about pouching stoma leakage odor and fear of anyone to see pouch and feces.

Siriraj Stoma Bag Cover is the thing that improve ostomate care to living with stoma and having a better quality of life.

Method

The Siriraj Stoma Bag Cover make from the cloth in various style of cloth and color. The size of stoma pouch cover is bigger than the stoma pouch a little. The procedure is selection the cloth and cut the cloth as the pattern that make before then sew and add two tails at right, left side.

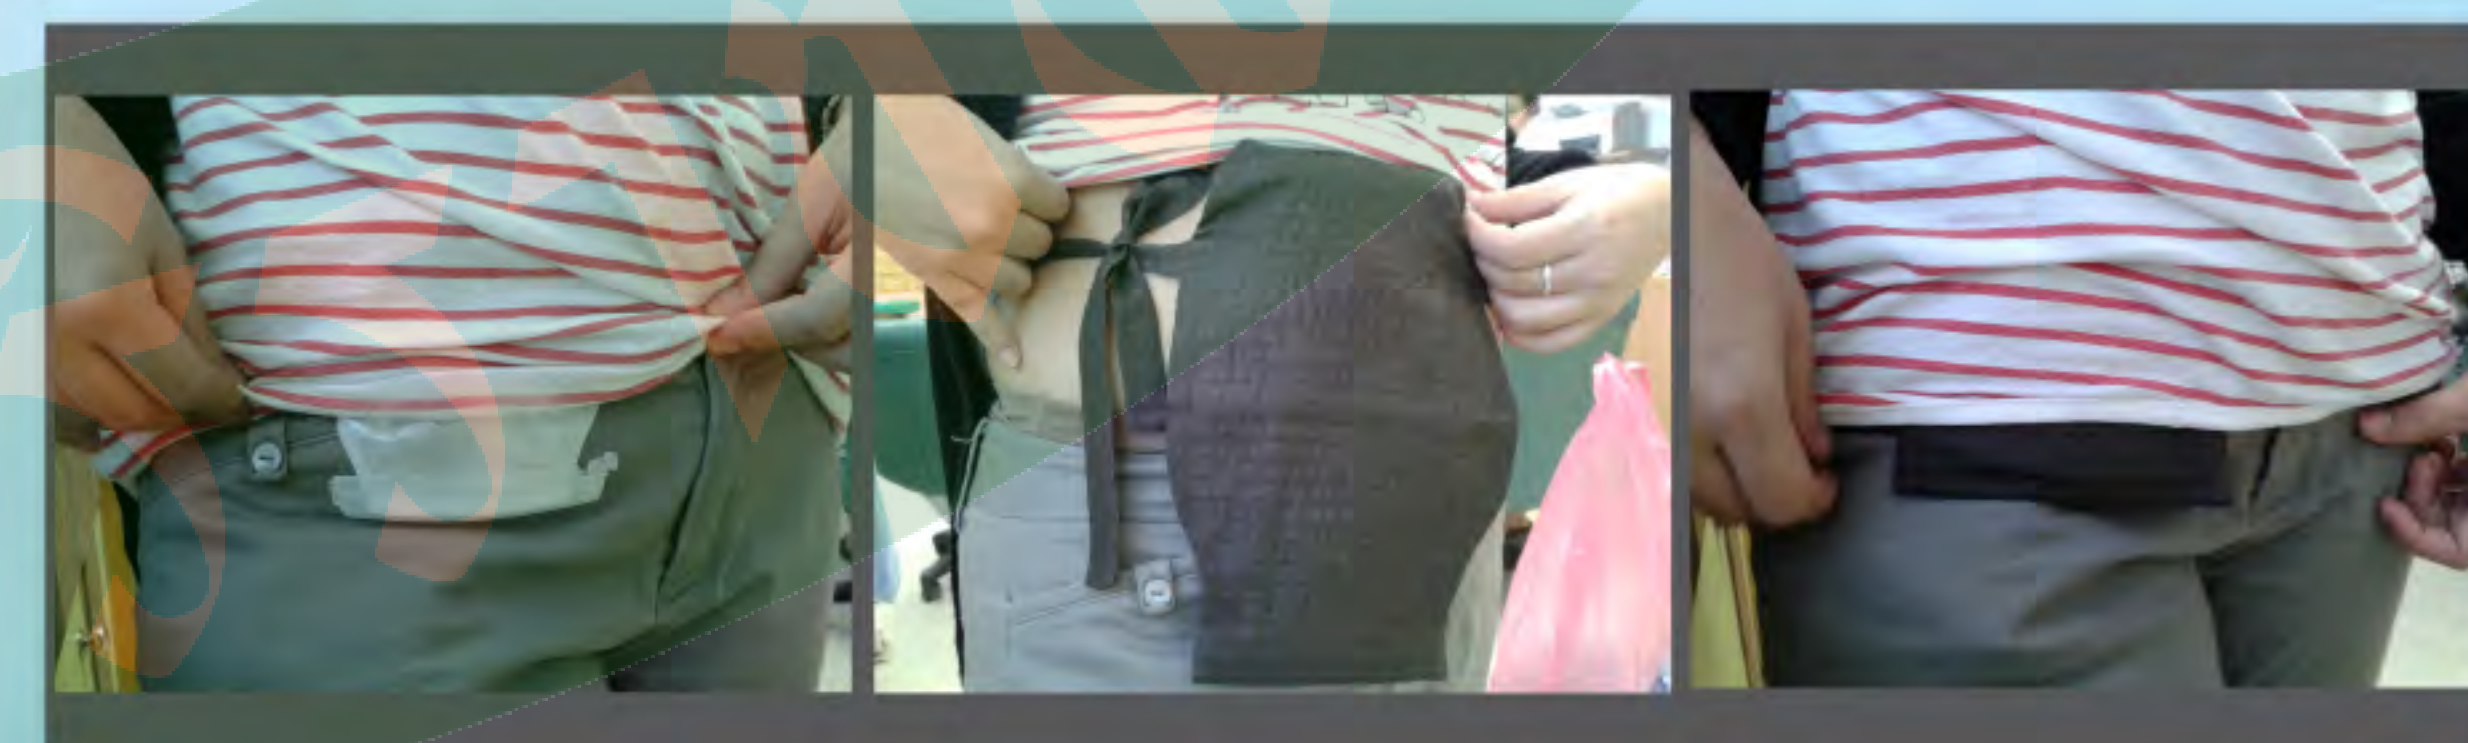

After stoma pouching, wear the siriraj stoma cover. Feces can be drain the end of the pouch as usual. Evaluation by answer the questionnaire.

Results

Items	outcome
1. Period of time pouching rate was longer	80%
2. Feeling be not hated rate	100%
3. Anxiety rate was reduced	100%
4. Having self-confidence to living with stoma rate	100%
5. Satisfaction rate	100%

Conclusion

Ostomates feel not only anxiety was reduced but also feeling not isolated was better.

" I feel good and more comfortable with the coverage, not be disgusted from other. It looks like a nice pocket."

Thank you for every patients "I am appreciated that I have you to give caring"
